Jiani (Elva) He

Data Science Consultant · Independent Researcher
Seattle, Washington | jiani19980225@gmail.com | jiani19980225.github.io | LinkedIn | Google Scholar

RESEARCH INTERESTS

Demand-forecast stability and planning value; causal decision support under partial information; trustworthy deployment of AI systems; AI-assisted reverse logistics.

Related areas on the U.S. Critical and Emerging Technologies List (2026): AI and Autonomy (research), and Semiconductors and Microelectronics (through data center hardware supply chains).

PROFESSIONAL EXPERIENCE

Accenture
Jun 2024 - Present

Data Science Consultant — Seattle, Washington

Forward and reverse logistics in a technology client's data center supply chain. Promoted from Senior Analyst in 2024.

- Lead planning analyses for the client and present recommendations directly to senior leaders.
- Steer recovery decisions for retired hardware: analyze reverse-logistics cycle time and on-time delivery in SQL, find bottlenecks, and route assets to reuse, resale, recycling, or disposal by value and lifecycle stage.
- Rebalance inventory across sites with an optimization engine, matching stock targets to demand to prevent shortages.
- Plan quality-assurance component quantities from demand and bill-of-materials data; define service metrics and support automated inventory adjustments.
- Bring generative AI into daily analysis: standardize prompts and queries for enterprise LLM assistants, write reusable guides, and train analysts.
- Mentored five junior analysts across both roles; lead onboarding and team training.

Accenture
Oct 2021 - May 2024

Data Science Senior Analyst — Seattle, Washington

- Built SQL dashboards and shortage alerts that compare inventory with demand and inform transfers between sites.
- Tracked reverse-logistics cycle times and on-time delivery; flagged bottlenecks and supported reuse, disposal, and recovery scheduling.
- Diagnosed inventory imbalances and abnormal cycle times with statistical analysis; automated reporting and purchase-order workflows.

BMW Group
Feb - Aug 2021

Data Scientist Intern · MIT Capstone, Dynamic Vehicle Pricing — Cambridge, Massachusetts

- Modeled vehicle demand and cross-price elasticity in Python to recommend discounts by customer segment and sales channel; built Tableau pricing dashboards.

EDUCATION

Massachusetts Institute of Technology
Aug 2021

MS, Business Analytics · Operations Research Center | GPA 4.7 / 5.0 — Cambridge, Massachusetts

Classification trees for 40,000 news articles (Python/Julia) and robust bike-allocation models (Julia). Analytics Lab: an NLP admissions Q&A pipeline for AdmitHub with response evaluation and human review.

Purdue University
May 2020

BS, Industrial Engineering · Honors & Distinction | GPA 3.9 / 4.0 — West Lafayette, Indiana

LSTM forecasting models (Keras) and reinforcement learning for sensor placement (Python/R).

SERVICE & MENTORING

- Peer reviewer for 10+ journal manuscripts.
- Mentored five junior analysts across Accenture roles; led onboarding and team training, including AI-assisted analysis.

SKILLS

Tools: SQL, Python, R, Julia, Keras, Tableau, AWS

Modeling: Machine learning, Forecasting, Regression, Classification, Clustering, Robust optimization

Analytics & BI: Statistical analysis, Root-cause analysis, Data visualization, Dashboards, KPI design

AI: Generative AI, NLP, LLM workflows, Prompt & query design

Consulting: Problem framing, Client communication, Stakeholder coordination, Project delivery, Mentoring
